

Association for the Development of the Figeac Country, established in September 2004, aims to develop, construct and contribute to the implementation of sustainable development strategies of the Figeac Country in the field of economy, social services, environment, culture and tourism and thus contribute to the revitalization of the area, as prefigured by Sustainable Development Charter of the Country. The Figeac Country has developed an action plan in terms of supply and accessibility of health services. A reflection on the relationship between the services and professionals was carried out in order to enable optimization of existing resources in a context of providing quality service. www.pays-figeac.fr
